### **Snike movement trainer test**

...

Dear Mister Rolli,

thank you very much again for lending us your SNAIX movement trainer for such a long time. The device has left the therapists very positively impressed and has been used by them a lot in their spare time, too.

... Our orthopedic patients (spine, hips) however leave the clinic rather soon and are not allowed such training until then. At a later point of time we consider it extremely useful.

Our neurological patients are usually so badly handicapped that they cannot mount or sit freely on a bicycle.

We would like to have a SNAIX movement trainer in our section nonetheless, but our very tight budget does not allow us the acquisition of a trainer for just a few exceptional patients.

...

Kind regards
